Research Interests

My research focuses on AI for Biology, developing multimodal foundation models and self-improving AI systems to understand biomolecular structures, functions, and interactions, and to enable generative molecular design and AI-driven drug discovery, with the following research topics:

- **Multimodal Biological Foundation Model:** Structure-guided RNA foundation model: structRFM [R8] (*Nature, Accepted*).
- **Molecular Design and Drug Discovery:** RNA and DNA aptamer design: NACraft [R10].
- **Molecular Interaction and Scoring:** RNA-compound interaction prediction and binding-site localization: ReTIF [R11] (*bioRxiv*).
- **Structure and Function Prediction:** RNA secondary structure prediction: BPFold [R6] (*Nature Communications*), NCfold [R9] (*ICLR 2026*); IRES identification: IRESeek [R7].
- **Recursive Self-Improvement:** Self-evolving scientific agent for sustained research across heterogeneous tasks: ADMET-Evo [O9] (*arXiv*).

Previously, I developed universal models for **Medical Image Analysis:** domain adaptation: GU2Net [R1, R2] (*MICCAI 2021, BMEF*), DATR [R4]; few-shot learning: UOD [R5] (*MICCAI 2023*).

Education and Employment

Ph.D.	University of Science and Technology of China (USTC) , Biomedical Engineering • Advisor: Prof. Shaohua Kevin Zhou	09/2023 – 06/2026
M.S.	Institute of Computing Technology (ICT), Chinese Academy of Sciences (CAS) & University of Chinese Academy of Sciences (UCAS) , Computer Science and Technology • Advisor: Prof. Shaohua Kevin Zhou	09/2020 – 06/2023
B.S.	University of Science and Technology of China (USTC) , Computer Science and Technology • Hua Xia Talent Program in Computer Science and Technology	09/2016 – 06/2020

Selected Research Projects

NACraft: Programmatic Nucleic-Acid Aptamer Design via All-Atom Structure-Model Feedback Code	Research Project 08/2026
• Lead developer; designed and implemented a training-free framework for de novo, similarity-guided, and target-selective RNA and DNA aptamer design through backpropagation of structure-model feedback. • Unified binding, sequence-similarity, and anti-binding objectives within a single differentiable optimization framework, followed by NA-MPNN refinement and independent AlphaFold 3 evaluation. • Achieved maximum AF3 ipTM values of 0.63–0.88 across five protein targets; 69.44% of paired candidates favoured EGFR over HER2, and NACraft outperformed ODesign on 10/11 NA-12 targets and 17/20 therapeutic target-length settings.	

structRFM: Fully Open Structure-Guided RNA Foundation Model [Paper](#) | [Code](#) Nature (Accepted)

- **First author**; developed the end-to-end pipeline spanning sequence–structure data construction, pre-training objective and model design, downstream adaptation, benchmarking, and open-source release.
- Built the pre-training stack on **21 million RNA sequence–structure pairs**, combining **MUSES** multi-source structural annotations with **Structure-guided Masked Language Modeling (SgMLM)** to capture local base-pair contexts while reducing annotation bias.
- Produced sequence-, nucleotide-, and pair-level representations; achieved state-of-the-art results on multiple RNA structure and function benchmarks and ranked among the top four in zero-shot homology classification.

BPfold: Generalizable RNA Structure Prediction with Thermodynamic Priors Nature Communications 07/2025
[Paper](#) | [Code](#)

- **First author**; led the complete method pipeline, including motif-library construction, network architecture design, experimentation, result analysis, and reproducible software release.
- Built the core modeling chain from complete three-neighbor base-pair motif enumeration and de novo tertiary-structure energy estimation to thermodynamic energy maps, **base-pair attention**, and physically constrained contact-map refinement.
- Improved F1 and INF by **approximately 5%** over SPOT-RNA on bpRNA-TS0 and achieved the best **F1 of 0.689** on **10,791 RNAs from unseen families** in Rfam12.3–14.10.

USTC Course Resources [GitHub](#) (16.2K GitHub stars) 2019 – Present

- **Project lead and maintainer**; led long-term repository maintenance and curation of student-authored course notes, examinations, code, and learning resources for the USTC community.

Honors and Awards

President's Excellent Award , Chinese Academy of Sciences	2026
Provincial Outstanding Graduate (Ph.D., Class of 2026) , Anhui Province	2026
Outstanding Graduate (Ph.D., Class of 2026), USTC	2026
Outstanding Academic Presentation Award (1st of 10), The 7th USTC Academic Forum for Engineering Graduate Students	2026
National Scholarship for Doctoral Students , Ministry of Education of China	2025
Second Prize for Oral Presentation, The 3rd National Conference on Biomolecular Structure Prediction and Simulation	2025
Suzhou Industrial Park Scholarship, USTC	2025
Merit Student Award, UCAS & ICT	2023
Graduate Academic Scholarship, UCAS & ICT and USTC	2020 – 2025
Outstanding Student Award, USTC	2018 – 2019
Institute of Chemistry Talent Award, USTC	2017

Internship Experience

Tencent, JARVIS Lab , Research Intern	Shenzhen, China
• Developed a depth-supervised feature-fusion transformer for salient object detection [R3].	07/2021 – 11/2021

Talks and Presentations

Multimodal AI for RNA modeling and foundation model

[PDF](#)

06/15/2026, virtual, MSD R&D China Innovation Collaboration Center (MCICC)

12/2025, Suzhou, China, USTC Course on Digital Healthcare Technology and Applications

Structure-guided RNA foundation model for structure and function prediction

[PDF](#)

06/13/2026, Hefei, China, The 7th USTC Academic Forum for Engineering Graduate Students & the "Dechuang · Jingjian Innovation" Doctoral Academic Forum.

- Outstanding Academic Presentation Award, 1st of 10

Deep generalizable prediction of RNA secondary structure via base pair motif energy

[PDF](#)

05/2025, Changchun, China, The 3rd National Conference on Biomolecular Structure Prediction and Simulation

- Outstanding Academic Presentation Award, 2nd of 12

Research Mentorship

Ao Chang, Ph.D. Student: Motif-informed RNA language pre-training using Mamba 2025 – 2026

Haobin Chen, M.S. Student: LLM-based agents for retrieving lncRNA knowledge from the literature 2025 – 2026

Duofan Tu, M.S. Student: Medical agents for clinical diagnosis 2024 – 2026

Feng Zhang, M.S. Student: IRES identification in circular RNAs 2024 – 2026

- IRESeek: a structure-informed deep learning method for accurate identification of internal ribosome entry sites in circular RNAs

Xiaoqian Zhou, M.S. Student: Anatomical landmark detection in medical images 2022 – 2024

- Hybrid attention network: an efficient approach for anatomy-free landmark detection

Zhen Huang, M.S. Student: Anatomical landmark detection in X-ray images 2021 – 2023

- Pele Scores: pelvic X-ray landmark detection with pelvis extraction and enhancement

Teaching Experience

- **Teaching Assistant:** Open Practice in Electronic Information, USTC, 2023
- **Teaching Assistant:** Biomolecular Structure Modeling, USTC, 2024

Academic Service

- **Academic Reviewer:** NeurIPS, ICLR, MICCAI, TCSVT
- **Volunteer Activities**
 - Medical Augmented Reality Summer School (Suzhou, 2024)
 - Dushu Lake Symposium on Medical Image Computing (Suzhou, 2023)

Technical Skills

Methods: Foundation models, multimodal learning, large language models, diffusion models

Programming & Tools: Python, PyTorch, C++, Git, $\text{\LaTeX}$, Matplotlib
